

Average value probe

Order nr.: 803712 1011

Average value probes are used in ventilation ducts where they measure the temperature in gaseous media. Our average value temperature probe can be used in the measuring range from -30 to +80 °C. It has a high-quality copper probe rod, which measures the average temperature over the entire cross-section. In the scope of delivery you will find a suitable plastic mounting flange and, depending on the length, mounting clamps. Please select a suitable measuring element and the required rod length and send us the order code.

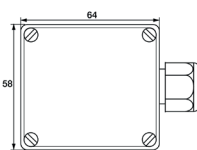

General Information	
Measuring range	-30 °C to +80 °C depending on the rod
Perm. range °C Housing	-30 °C to +90 °C
Accuracy	depending on sensor type
Response time	t63 / t99: information is available on request
Supply and output	
Max. measurement current	max. 1 mA
Supply voltage	approx. 5 V depending on measurement current
Measurement signal	passive (resistance value)
Ambient conditions	
Protection class	IP65 according DIN 60529
Humidity and moisture condensation resistance	according to application-specific qualification
Certificates and Standards	
Standards	DIN EN 61326-1:2013 DIN EN IEC 63000:2019-05
Directive	RoHS 2011/65/EU 2014/30/EU
Certificates	Certificate of suitability (on request)

Important assembly advices
Average value temperature probes measure the temperature over the entire length of their rod. Please place the probe in the air duct at equal distances and keep a bending radius of at least 30°. Fasten the rod with mounting clamps (included in delivery). A suitable plastic flange is included for mounting in the duct. Further mounting flanges made of aluminum or stainless steel as well as compression fittings can be found on our website. Please lay the cable with reserve loop (5). This allows you to extend the probe without disconnecting the electrical connection.
