

Outdoor temperature probe

Article no.: 801010 1011

Fluctuations in the control of the heating system caused by temperature jumps can be avoided with outdoor probes with internal sensors. The dust-tight, jet-proof housing (IP 65) made of UV-resistant and impact-resistant polyamide, optimised for use outdoors or in moist areas, reduces the reaction speed of the sensor and protects against adverse weather conditions. The quick-release fastener allows easy wall mounting.

General Information	
Measuring range	-30 °C to +90 °C depending on the measuring element and the housing
Perm. range °C Housing	-30 °C to +90 °C
Accuracy	depending on sensor Type
Response time	t63 / t99: information is available on request
Supply and output	
Max. measurement current	max. 1 mA
Supply voltage	approx. 5 V depending on measurement current
Measurement signal	passive (resistance value)
Ambient conditions	
Protection class	IP65 according DIN 60529
Humidity and moisture condensation resistance	according to application-specific qualification
Certificates and Standards	
Standards	DIN EN 61326-1:2013 DIN EN IEC 63000:2019-05
Directive	RoHS 2011/65/EU 2014/30/EU
Certificates	Certificate of suitability (on request)

Important assembly advices

Install the outdoor probe at a sufficient distance from ventilation openings, windows or doors and preferably on the north wall, alternatively on the west or east wall of the building. Avoid direct sunlight and rain and use a sun protection, if necessary. Please lay the connection cable downwards or to the side so that no water can remain on the screw connection. A slightly sagging cable ensures that precipitation can drain off well. Please take the permissible ambient conditions into account during installation.
